TEXT

GROWING UP IN A DIGITAL WORLD: BENEFITS AND RISKS

Digital technologies have profoundly changed childhood and adolescence. The internet and smartphones have become integral to the lives of youth around the world. They have transformed their education and learning, the way children make and maintain friendships, and how they spend their leisure time. UNICEF reveals that 71% of young people (aged 15 to 24 years) are online, so they are the most connected age group worldwide.

However, the so-called digital divide is substantial. There are millions of young people who are not online, particularly in Africa, where 60% of them are not connected. They are left behind in using the opportunities that digital technologies can provide. For instance, the benefits include access to education, training, and jobs, as well as access to news and information sources that can help protect their health, safety, and rights.

Despite these benefits, digital technologies bring a number of risks and harms. The most important is that digital technologies have increased the scale of child sexual abuse and exploitation. It is a fact that digital technologies create new forms of communication, but they also allow offenders to talk to children more easily. Cyberbullying is another harmful consequence of digital advances. Bullies obtain and disseminate sexual or intimate photos of a peer and share them with or without the individual's consent. So, it is important to promote digital policies and to study the effect of the content children encounter online.
